

SMART UNDER PRESSURE

Patented pressure-control technology designed for safer, more efficient hydro excavation

DigRight® technology helps operators maintain safe, controlled excavation pressure with the push of a button.

Integrated with TRUVAC's Multi-flow water system, DigRight automatically adjusts water flow to match nozzle selection while preventing pressure from exceeding site or industry requirements.

The result: greater control, reduced component wear and more efficient operation.

SAFETY

Helps maintain pressure within site and industry requirements for safer excavation around underground utilities.

EFFICIENCY

Automatically adjusts water flow to match nozzle selection while reducing wasted energy and fuel consumption.

LONGEVITY

Reduces wear on check valves, unloader valves and relief valves by avoiding unnecessary water bypassing.

BUILT FOR REAL-WORLD EXCAVATION

DigRight technology is available on most TRUVAC vacuum excavators, including:

• **Paradigm®** • **FLXX®** • **HXX®**

Designed for utility, municipal, construction, oil and gas and infrastructure applications.

INTEGRATED TRUVAC WATER SYSTEM

- 3,000 psi standard water system
- 10 or 20 gpm flow options
- Multi-flow hydraulic water pump control
- Heated and insulated cabinet options for cold-weather operation

WHY OPERATORS PREFER DIGRIGHT

- One-touch operation simplifies pressure management
- Helps reduce operator error and equipment strain
- Supports safer digging best practices
- Improves consistency across varying jobsite conditions

See how DigRight improves excavation control and efficiency.
